

Testimonials from 2009 Die Design

The instructors are very experienced and knowledgeable. The topics are thorough and well organized. I am more prepared for my Die Design projects.

Joe Pingree, Plastics Resources, Inc.

This seminar was an eye opener about why solutions I perform in my dies work. This information will help me plan these things into my dies before I shoot them the first time.

Stan Sanders, United Plastics Corporation

Struggling Through our own process for over a year has been highly stressfull, not completely understanding what is happening.

This course was an eye opener into what was taken for granted. I have learned a lot and many things to try to alleviate problems upon return to the facility. I feel that we are no longer alone with the contacts that have become available. (Instructors, Facility employees). **Carl Sykes, Thordon Bearings**
